

Your child's X-rays of some of the bones in their body (skeletal survey)

Department of Radiology

Last reviewed: May 2024

Next review: May 2027

Information for Patients, Parents and Carers

Leaflet number: 33 Version: 7

Introduction

We have been asked to X-ray your child. If they are old enough please give them this leaflet to read. For younger children, please go through this leaflet with your child so they know what to expect on the day.

It is important that your child knows what to expect when they come for the test so that it can be completed quickly and easily.

Important information for parents and carers

Before the appointment:

- **If you need an interpreter, or if you have any special requirements**, please contact the Radiology Department for more information.
- **Medication should be taken as usual** unless you have been given different instructions by the doctor.
- **Getting to the hospital:** Transport has not been arranged for this appointment. If transport is needed please call either your GP or the Radiology Department.

At the appointment:

- Other children will not be allowed in the X-ray room whilst this test is being done. If you have any other children please make other child care arrangements for the appointment and do not bring them into hospital if possible.
- Pregnant mothers will not be allowed to hold their child for an X-ray.
- Your child might also have a CT scan of their head on the same day as the skeletal survey. We will talk to you about it on the day if your child needs a CT scan.

**Health information and support is available at www.nhs.uk
or call 111 for non-emergency medical advice**

What is a skeletal survey?

A skeletal survey examination is where X-ray pictures are taken of some of the bones in the body. This includes the skull, chest, tummy (abdomen), pelvis, arms, legs, hands and feet.

The examination takes place over 2 appointments, about 2 weeks apart.

- **1st appointment** your child will have about 30 X-rays pictures. The number will vary for each child. The whole examination will take between 30 minutes to 1 hour.
- **2nd appointment** will be arranged for your child in 11 to 14 days. At this appointment we will take more X-rays of the chest, ribs, arms and legs. This is because some problems or injuries do not show up straight away. Your child will have about 11 X-ray pictures at the second appointment. This will take about 30 minutes.

Why is a skeletal survey needed?

The reason for the examination should be explained to you before your appointment by the doctor who asked for the examination to be done.

X-rays and scans can help identify broken bones, injuries or other problems, where there are no external signs.

How should my child get ready for a skeletal survey?

- Please go through this leaflet with your child if you want to.
- Before the appointment, the person who does the X-rays (a radiographer) will talk to the nurse and doctor looking after your child on the ward. They will talk about any special requirements your child might need. This could be a play specialist to keep to help keep your child entertained for the skeletal survey, or sedation to make them relaxed or sleepy during the examination.
- If your child is on pain relief for any reason, it is better if this is working at its best during the examination. We will talk to the nurse and doctor about the best time to do the examination.
- Your child will need to have most of their clothes taken off for the examination. A baby vest or sleep-suit can be kept on.
- It is best to feed small babies right before the examination so that they are settled during the examination.

When and where will the skeletal survey be done?

Skeletal surveys are done in an X-ray room in the Children's X-ray department at Leicester Royal Infirmary.

These X-rays are done between 9am to 5pm, Monday to Friday.

This is when the specialist X-ray doctor (Radiologist) is in.

What happens in the X-ray room?

- You may go into the X-ray room with your child when the test takes place unless you are or have any reason to suspect you might be pregnant.
- In the X-ray room the radiographer will tell you what will happen. They may ask you to help keep your child as still as possible during the examination.
- If a parent or carer is staying in the X-ray room to help, the radiographer will explain how to hold your child in position for each X-ray.
- The examination is not painful. Younger children may get distressed as they will need to be held still for a short time while each X-ray picture is taken. It may help to bring a dummy, toy or anything else that may help to comfort your child during the examination.

What happens after the skeletal survey?

If your child needs a CT scan of their head, this will be done either before or after the skeletal survey.

When the X-rays and scan have been taken, you will be able to go back to the ward.

How do I get the results?

You will not get the results straight away.

The results will be sent to the GP or hospital doctor who wanted your child to have this test.

What are the risks from exposure to radiation in this procedure?

The risk of having X-rays is very small. We are all exposed to natural background radiation every day of our lives. This comes from the sun, the food we eat, and the ground. Each X-ray gives a dose on top of this natural background radiation. The risks of radiation are slightly higher for the unborn child, so for some types of X-rays of the abdomen and pelvis we must ask some patients aged 10 and over about their periods.

The radiation from the X-rays during this test is equivalent to about a few months of natural background radiation.

Any questions or concerns about the use of X-rays can be answered at the time of the appointment. We try to keep your child's exposure to X-rays as low as we can.

What if I need to talk to someone?

If you have any questions or concerns, or cannot make the appointment:

Please call the X-ray department on **0116 258 8765** and select **option 1**. Monday to Friday 9am to 5pm, but not on bank holidays.

If you have any questions when you are at the appointment you can talk to the nurse or doctor on the ward, or ask the radiographer.

Information for children:

What is an X-ray?

An X-ray is a photograph of a part of your body.

A special camera is used to take the photograph. It is very big, hangs from the ceiling and makes a funny noise when it takes a picture. It will not touch you and you will not feel the picture being taken.

What happens during the X-ray?

- When you are in the X-ray room we will ask you when your birthday is and where you live.
- You will have to either stand, sit or lay down on the X-ray bed, depending on which part of your body we are taking a picture of.
- We will move the X-ray camera and shine a light on the part of your body that we are taking a picture of. If we are taking a picture of a bit that hurts, we will be very careful, but you may have to move a little.
- If you are little your mum, dad or carer may stay with you to help with the picture.
- The X-ray camera will make a funny noise when it takes the picture, but you will not feel anything. It is like when a photograph is taken.

What if I need to talk to someone?

If you have any questions before or after the X-rays, you can talk to the nurse or doctor on the ward.

If you have any questions in the X-ray room, you can talk to the person doing your X-rays (the radiographer)
