

G-CSF and plerixafor treatment

Bone Marrow Transplant Unit
Information for Patients

Produced: Dec 2024

Review: Dec 2027

Leaflet number: 522 Version 6.1

Important dates

Outpatient appointment for counselling

.....

Date to start G-CSF / dose

.....

Date to attend for stem cell collection (at 8.30am)

.....

Date and time of plerixafor dose (as necessary)

.....

Introduction

Your medical team has decided that you would benefit from having high dose therapy and stem cell transplantation. We hope that this booklet will help you understand how the stem cells will be collected, in order for them to be transplanted at a later date.

Medical research has shown that G-CSF (often combined with plerixafor) is one way of enabling us to collect stem cells from the blood. G-CSF is a growth factor that is used to increase stem cell production. Plerixafor helps to release the stem cells from the bone marrow. You will be given further information about G-CSF and plerixafor and possible side effects.

Having signed a consent form and agreed to this treatment, you will have blood tests, including testing for viruses. This will give us information about viruses you may have had in the past, and routine elimination of serious viruses such as hepatitis and HIV.

We are not allowed to store stem cells unless we have this information, and your doctor will have explained the reasons for this.

Your treatment schedule

There are three different schedules to move the stem cells into the blood so they can be collected. Sometimes, after the results of a blood test, you may be moved from one schedule to another. You will be informed of the reasons for this if it happens.

Schedule 1 (G-CSF only)

☐ Day1

(Date _____)

You will start your daily injections of G-CSF at 6pm. You may wish to give the injections yourself, and your nurse will teach you how to do this. Or we can arrange for your district (community) nurse to give the injections.

Day 5

(Date _____)

You will be asked to come to Osborne Treatment Centre (OTC), on level 2 of the Osborne Building at Leicester Royal Infirmary at 8:30 am. Bring any unused G-CSF injections with you. A blood test will be taken to assess whether your blood count is at a suitable level for stem cell collection. If it is, then you will have your stem cell collection.

Schedule 2 (G-CSF and additional plerixafor)

☐ If the blood test on Day 5 above shows that your blood count is not at a suitable level for collection to take place, you will need to stay at the hospital so that the nursing staff can give you a dose of plerixafor between 5pm and 6pm. You will be asked to stay for 30 minutes afterwards before going home. You will need to come to Osborne Treatment Centre (OTC) the following morning when you will have a dose of G-CSF before the stem cell collection starts. You will need to stay at the hospital so that the nursing staff can give you this injection at about 5pm. You will be asked to stay for 30 minutes afterwards before going home.

Schedule 3 (G-CSF and plerixafor)

☐ Day 1

(Date _____)

You will have G-CSF at 10am at home on Day 1, then every day at 10 am.

Day 4

(Date _____)

You will have G-CSF at 10am at home and then come to Osborne Treatment Centre (OTC) between 5pm and 6pm for your first dose of plerixafor. You will be asked to stay for 30 minutes before you go home.

Day 5

(Date _____)

You will be asked to come to Osborne Treatment Centre (OTC) on level 2 of the Osborne Building at Leicester Royal Infirmary at 8:30 am. Bring any unused G-CSF injections with you. A blood test will be taken to assess whether your blood count is at a suitable level for stem cell collection. If it is, then you will have your stem cell collection.

How are the stem cells collected?

Stem cell collection is carried out using a cell-separating machine. The machine takes blood out of a vein, spins it to separate the components and collects the stem cells into a bag. The remaining blood is then returned back to you via a different vein.

The stem cell collection will take approximately four hours and needs good access to two different veins or a functioning skin-tunnelled line.

You should expect to come for this procedure on two consecutive days, in order for us to obtain adequate numbers of cells for the transplant.

You should not feel unwell during or after the procedure, but should arrange for a responsible adult to take you home in a car or taxi. You should expect to be at the hospital for most of the day.

Cell storage

Your cells will be stored in an accredited facility, approved by the Human Tissue Authority. Whilst every care is taken to ensure your cells are transported and stored safely, we cannot be held responsible for events outside our control (for example: road traffic accidents or power failure) that may result in the loss of your cells.

Cells will be stored until required for your treatment, or up to five years. The need for continued storage will be kept under review.

Your cells will be destroyed in the event of your death, or after five years in storage if your doctor decides they are no longer of any benefit to you. You will be issued with a form telling you what cells are stored on your behalf.

If any cells are used in your treatment, or destroyed after five years, you will be sent an updated form. If you move house, please inform the laboratory using the details on the form.

Emergency contact number (24 hours a day, 7 days a week)

Telephone: 07931 865272

Other useful contact numbers

If you have any questions at any time during the whole process, please phone the following numbers, according to the hospital you normally attend.

Leicester Royal Infirmary

Cellular Therapy Centre

Telephone: 0116 258 5124 Monday to Friday, 9am – 5pm

Osborne Treatment Centre (OTC)

Telephone: 0116 258 5263 Monday to Friday, 8.30am - 6pm, Saturday 8.30am - 4.30pm

Haematology Ward (Ward 41)

Telephone: 0116 258 5088 or 258 6832 24 hours, 7 days a week

Bone Marrow Transplant Unit

Telephone: 0116 258 5698 24 hours, 7 days a week

Northampton General Hospital

Haematology Clinic Telephone: 01604 545031 Monday to Friday, 9am-5pm

Talbot Butler Ward Telephone: 01604 545334 24 hours, 7 days a week

Kettering General Hospital

Centenary Wing

Telephone: 01536 493638 Monday to Friday - Fri, 9am-5pm

Lilford Ward

Telephone: 01536 492834 24 hours, 7 days a week

Frequently asked questions

Is the collection always successful?

No, in about 10% of patients we cannot obtain enough cells for transplantation to go ahead. If this happens you will be given an appointment with the Transplant Team to come and talk about the other options available to you.

Will I have any side effects whilst I am attached to the cell-separating machine?

Possible side effects include:

- A headache
- A tingling sensation (caused by a low level of calcium in your blood)
- Pain at the site of the needles

What should I do if I feel unwell after my treatment, for example if my anti-sickness tablets are not working?

Please contact us immediately using the telephone numbers in this leaflet.
