Introduction

Our names are Corinne Farrow, Cath Marrow and Beth O'Callaghan and we are the nurse specialists (key worker) for patients with myeloma.

As a member of the healthcare team looking after you, we will ensure that you, your family and friends have access to appropriate support and information. We will be available as a point of contact from your diagnosis, through treatment and beyond (should you need it).

Our Role

- To act as a point of contact to ensure that you receive high quality care throughout your illness.
- To act as a link between you and other members of your healthcare team, both in hospital and in the community and to refer you to them as appropriate.
- To provide you with information about your diagnosis, treatment options and possible side effects.
- To offer support to you, your family and carers.
- To help you to obtain financial and welfare rights advice, as appropriate.
- To provide information about support groups and other organisations that you may find helpful.

We can meet with you in the Out-Patient Department, the Osborne Treatment Centre or on the ward. If you would like to contact us please use the details on the front of this leaflet. If there is no answer when you ring, please leave a message as we may be with a patient or working in clinic. Messages are checked twice a day and in our absence another member of the CNS team will respond to your enquiry.

The team looking after you

The team of health professionals looking after you is known as the multidisciplinary team, or MDT. The myeloma MDT is made up of:

Consultant haematologists - senior doctors who specialise in myeloma, its treatment and care.

They are: Dr Mamta Garg
Dr Linda Barton
Dr Shelina Sachedina
Dr Graham Asagba

Pharmacist team - Senior pharmacists who specialise in medication for Haematology patients

They are: Catherine Loughran — Consultant Pharmacist
Aurora Del Pozo — Oncology Pharmacist

Consultant haematologist (Transplant Specialist) - a consultant who specialises in high dose treatment or stem cell transplantation.

Myeloma nurse specialist (key worker) - who will act as a link between you and the rest of the team,

Consultant oncologist - a doctor who understands different cancers and is a specialist in cancer treatments.

Radiologist - a doctor who understands and interprets any scans or X-rays you have had.

Musculoskeletal interventional radiologist - specialises in techniques such as vertebroplasty and spinal problems.

The team looking after you (continued)

Other members of your health care team may be present at the MDT meeting: for example, a dietitian, occupational therapist, physiotherapist or palliative care nurse or doctor might be involved in this meeting.

What happens at the MDT meeting?

The MDT is there to ensure that each patient is given the same high standard of care, and has the most appropriate investigations and treatment, no matter who their GP is or which hospital they attend.

During the meeting, your healthcare team will look at your medical history and any relevant tests, scans, etc. that you have had. As a team, they will decide on the best treatment plan for you, based on the results of these tests, taking into account the type of cancer you have, your general health and any other relevant issues. Your team may decide that you need to have further tests or be referred to other members of the healthcare team.

How will I find out the outcome of the MDT meeting?

A member of the team will discuss your treatment plan with you. This will usually be at your out-patient appointment, or may be by telephone if you have agreed to being contacted by telephone. Your GP will be informed of your treatment plan following your consultation. You will receive a copy of the letter written after your consultation through the post.
