Information for Patients, Re-Admissions, Parents and Carers.

Deapp ("deep") is a structured education programme for children and young people with Type-1 Diabetes. The resource is a combination of physical resources, boards and games with digital animations, videos.

Hospitals and Health Care Professionals are trained to deliver the education by the Deapp team and the app can be downloaded on your own device so you can continue to learn at home or when you need more information on a subject.

Using a flipped learning approach the information is delivered through the varied animations and videos. Health Care Professionals will then go through what you have learnt using physical resources, games to ensure that you have clearly understood the information.

Better Knowledge and Understanding
Health Care Professionals will tailor the education to meet your needs.

Educational Games
Help to make the learning more engaging and fun.

Fun Animations
Animations in various styles help make complicated information easy to digest

Information for Patients, Re-Admissions, Parents and Carers.

Combined Resources
Using the app and props to build understanding

Track and Assess
Health Care Professionals will track your progress and test your knowledge along the way

Instructional Videos
Live action videos provide clear and accurate demonstrations for using your equipment.
